Yellowstone Steamboat Geyser eruptions continue breaking records, leaving earth scientists perplexed

Yellowstone National Park's Steamboat Geyser is quite active right now, and scientists aren't sure exactly why.

The geyser sped up its eruption cycle in June and set a new record for intervals between eruptions on June 15 when it blasted three days, three hours, and 48 minutes after its previous eruption.

But what's behind this increased explosivity?

"I wish I could tell you," said Michael Manga, of the University of California, Berkeley.

"I think this is what makes Steamboat, and geysers in general, so fascinating that there are these questions we can't answer," Manga added.

"Also of note, Steamboat has been pausing for a second and restarting the water phase, which I've been told is a rare occurrence," said Big Sky photographer Ryan Molde to the Gazette.

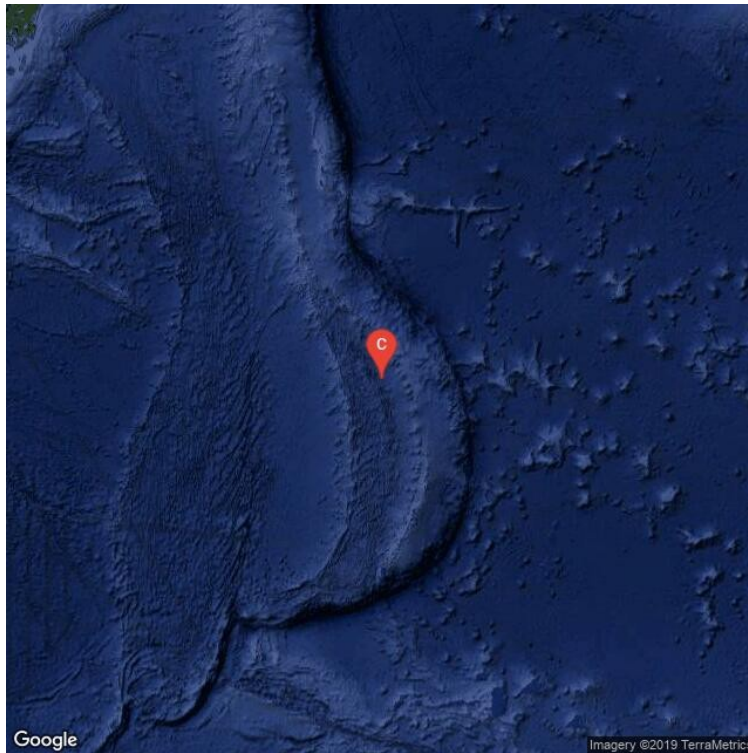

*"In addition, it's been going off for more time recently than it had been, and one of the park employees said the **June 15** event was also quite high."*

About five hours ago or 8 AM in Moreno Valley, California.

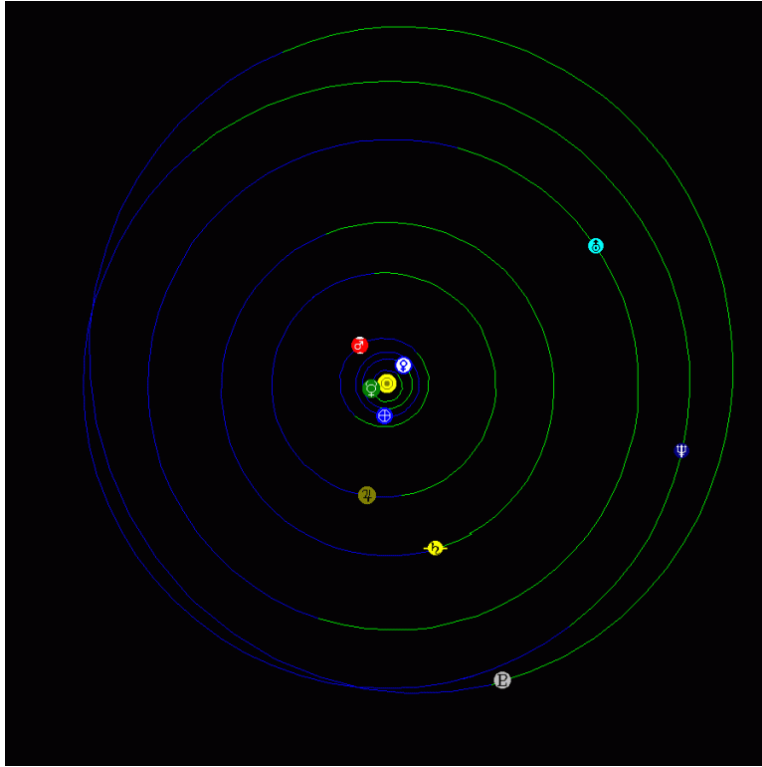

This is the lineup with Jupiter so you can tell approximately where He was at that time. In my chart you can see I expected two more earthquakes about 6.1 Magnitude somewhere and here is the first one over the last 24 hours. There may also be two more earthquakes when the Perturber aligns with our Moon and then the Sun. It's starting to rise towards the Ecliptic. If it hasn't aligned with Earth and Moon yet it must be on the verge of that array any time.

M 6.4 - 88km SW of Farallon de Pajaros, Northern Mariana Islands

<https://earthquake.usgs.gov/earthquakes/eventpage/us7000461a/executive>

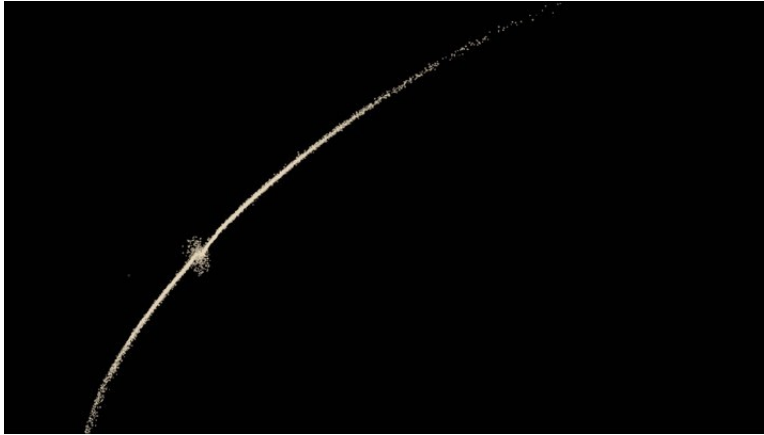

Date: 14:16:54 Jun 28, 2019

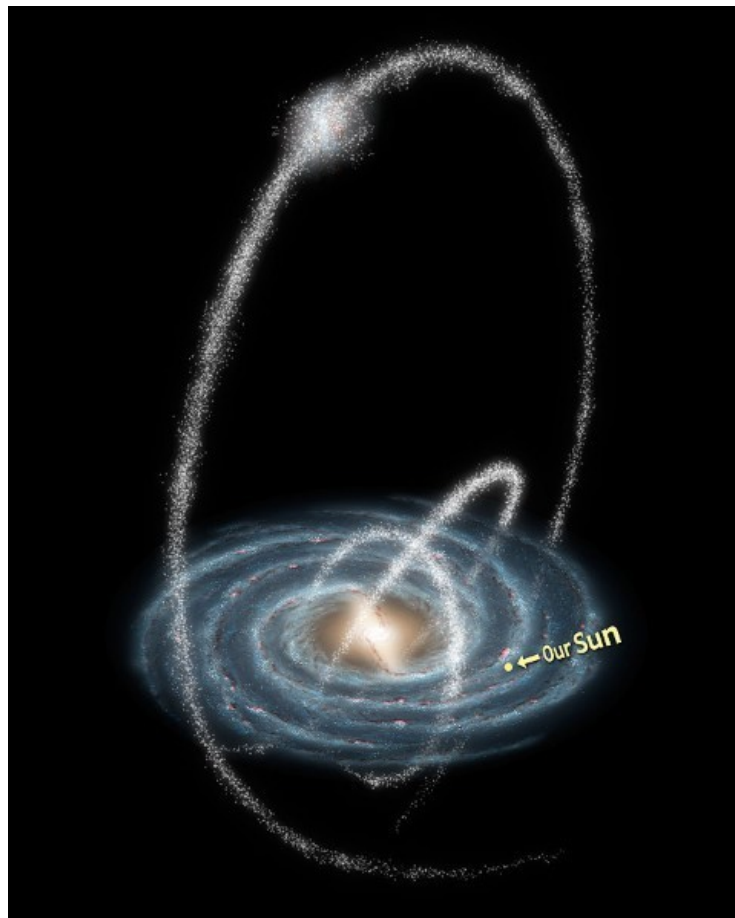

Solar System alignments June 2019 Anno Domini

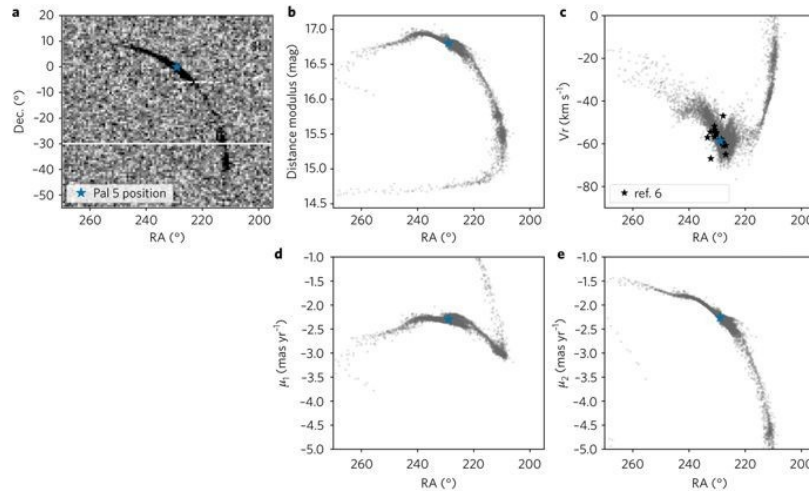

This is the Mars anomaly - this is exactly like the anomaly I found when Planet X passed through in 2013 AD but much smaller. Nasa says Cosmic Rays but Electromagnetism is a Cosmic Ray of sorts. This is from the lineup between the Perturber and Venus and Mars.

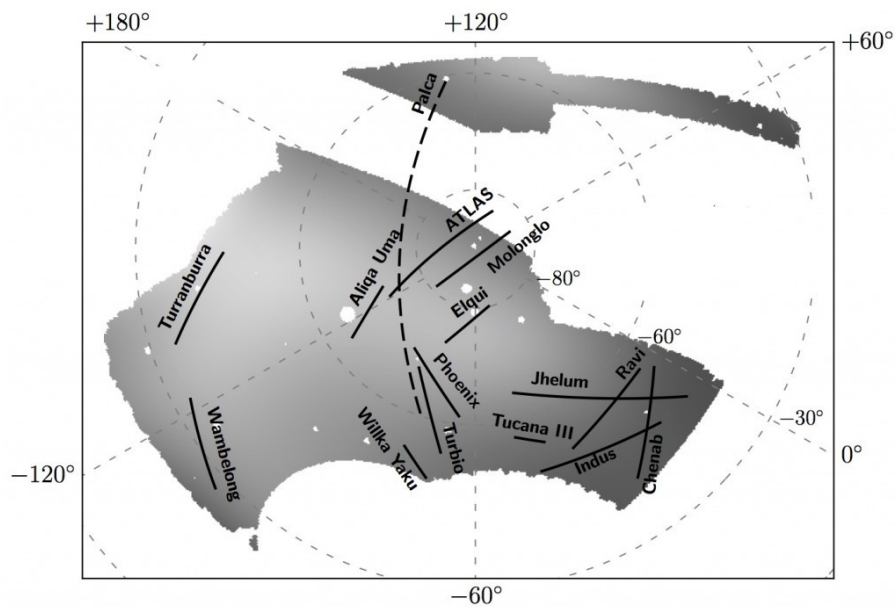

This is the Milky Way's "Halo" disturbed by a High Mass Object 500 Million Years ago and 5 Million times the size of our Sun (the largest Star is only 1500 times the mass of our Sun).

Stellar Stream GD-1

Note the Course Changes? Dark Matter does not work that way. The only thing that could change that course would be another Perturber of equal or greater mass which, then, would have left an equal or larger signature or Wake, as I call it.

They also don't appear out of nowhere nor disappear without a trace...

Date: 15:18:40 Jun 28, 2019

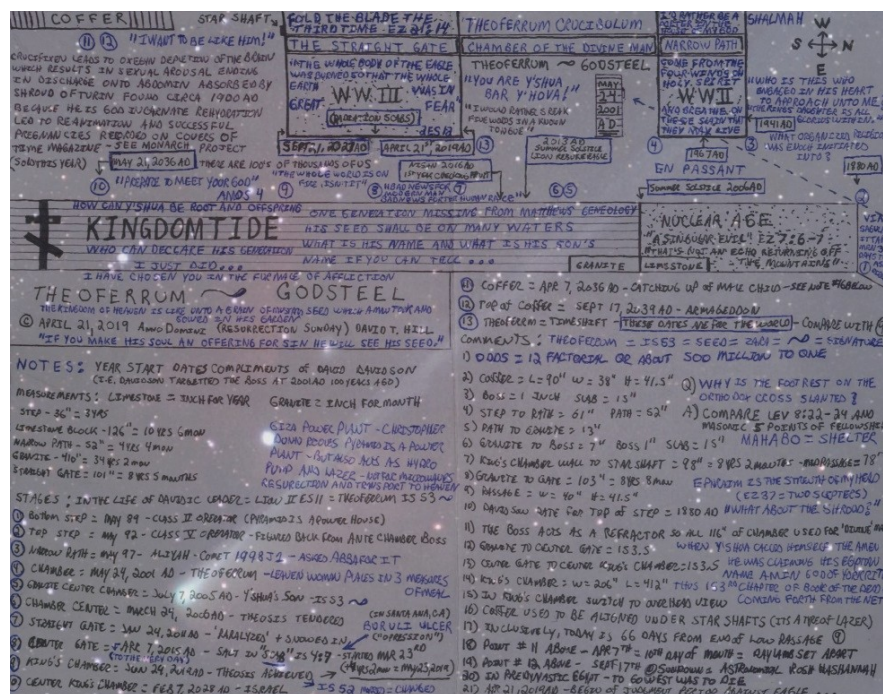

M 6.2 - 5km SE of Aserrio de Gariche, Panama

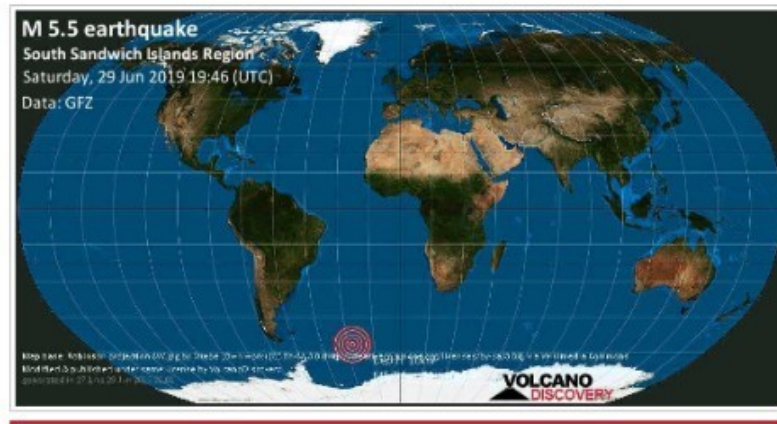

Just caught this one. It was a 6.2 on the 26th which would have been when He passed between the Sun and Earth.

Note the name David.

Told ya he was coming for me. This is the start of my Theosis as mentioned on my graph on the pyramid starting circa June 24, 2019 Anno Domini (*circled note #9 below lower left*).

Date: 15:05:15 Jun 29, 2019

Which way did he go?

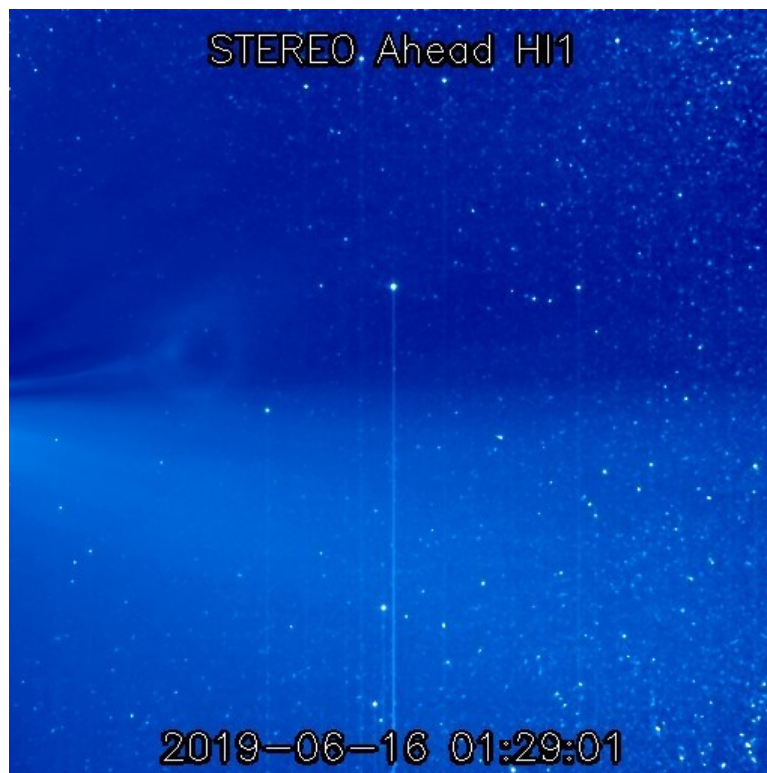

Antipodes of cities of South Georgia and the South Sandwich Islands

Detour to the G20 Meeting?

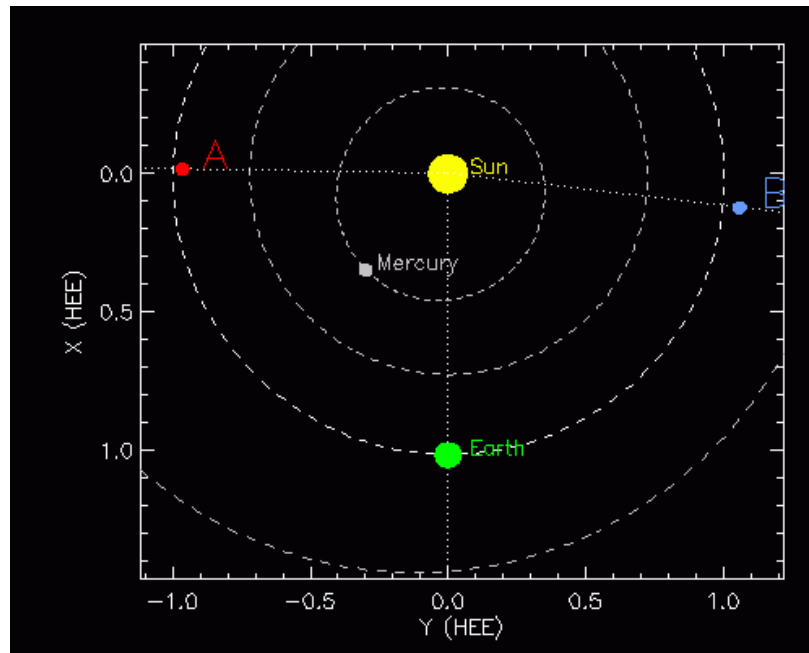

Date: 15:22:11 Jun 29, 2019

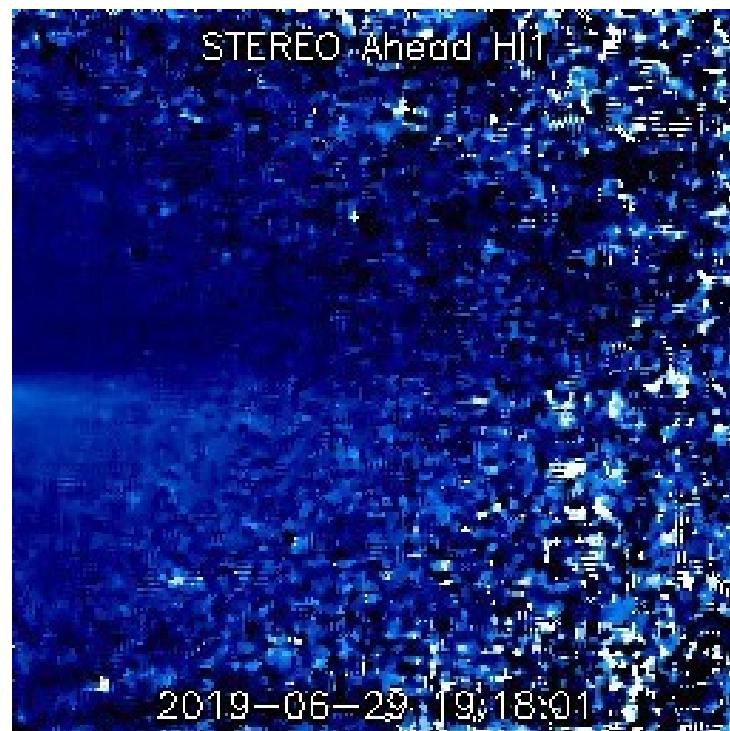

I blew a smoke ring at Him...

Perfectly round Solar Flare coming off the Sun when the Perturber broke the
Ecliptic...

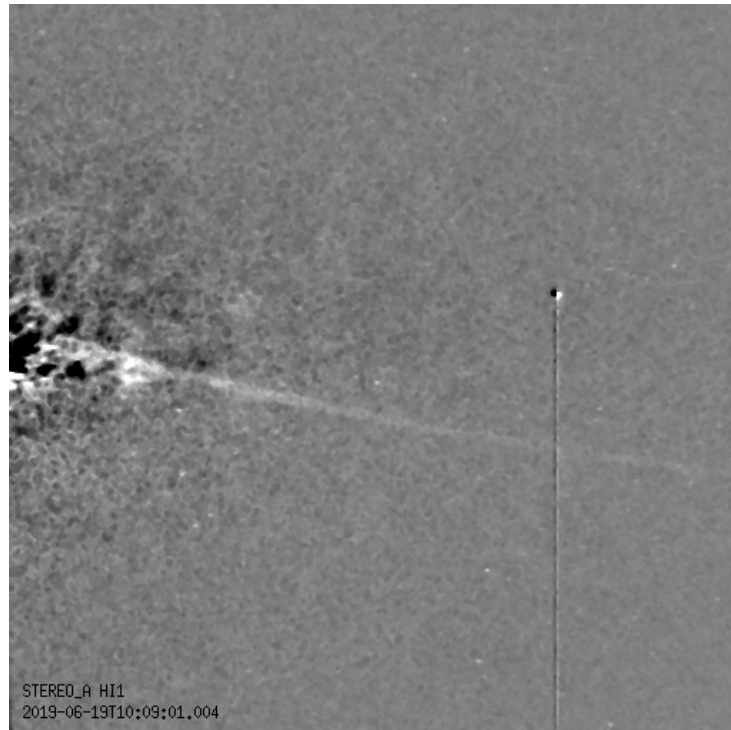

Date: 15:28:38 Jun 29, 2019

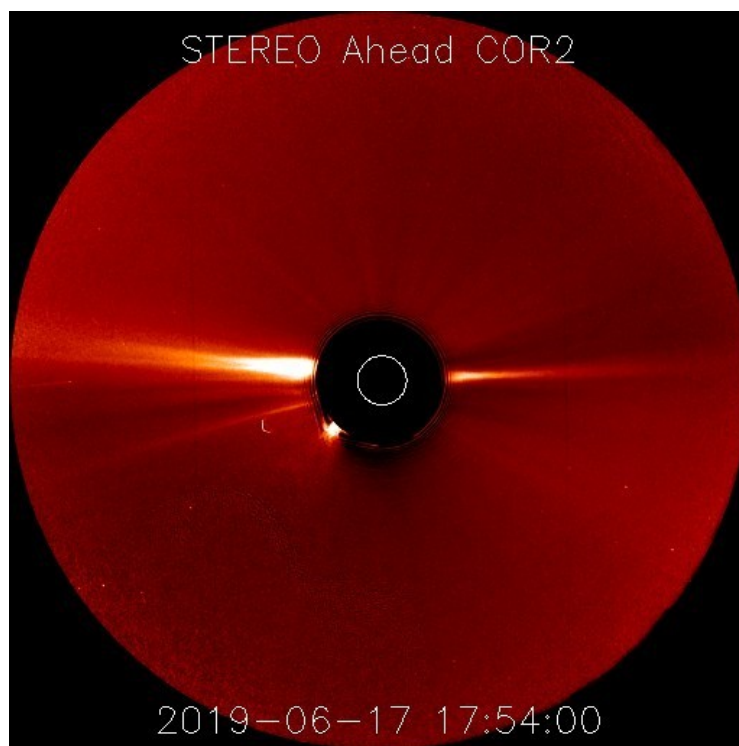

Gee, no kidding. Stereo Ahead just happens to go Tango Uniform right now...

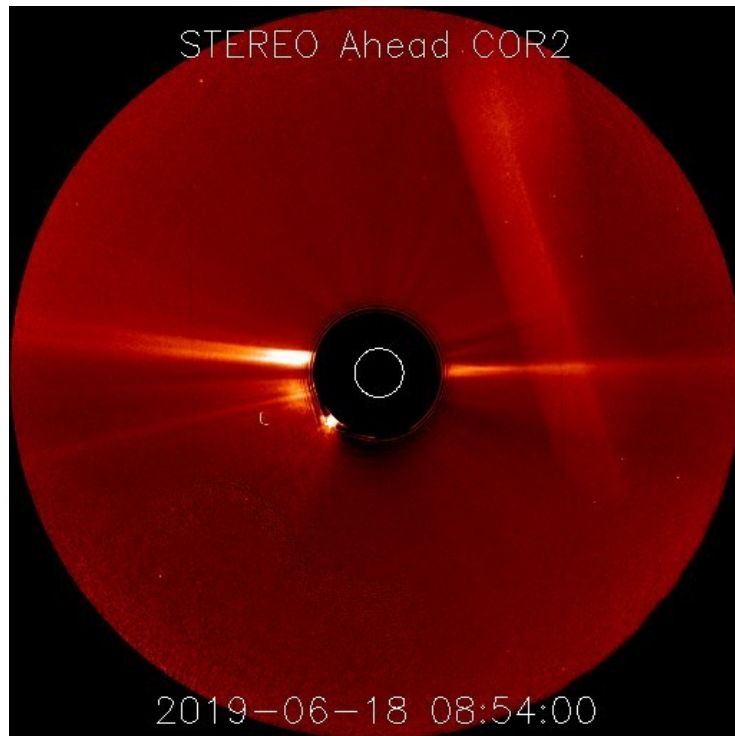

And what is that shooting past the sun and, I think, Mercury?

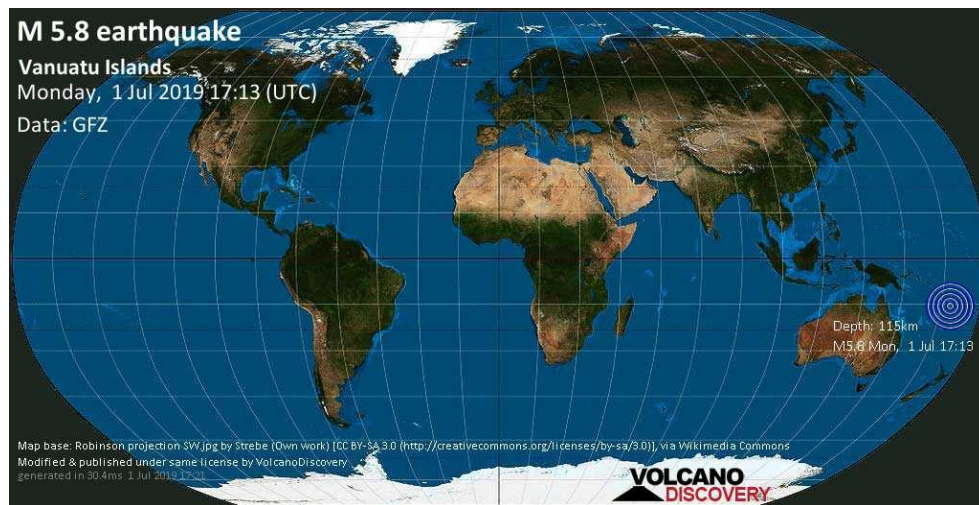

These flares started on the 14th...

Anyone what to tell me what that thing is?

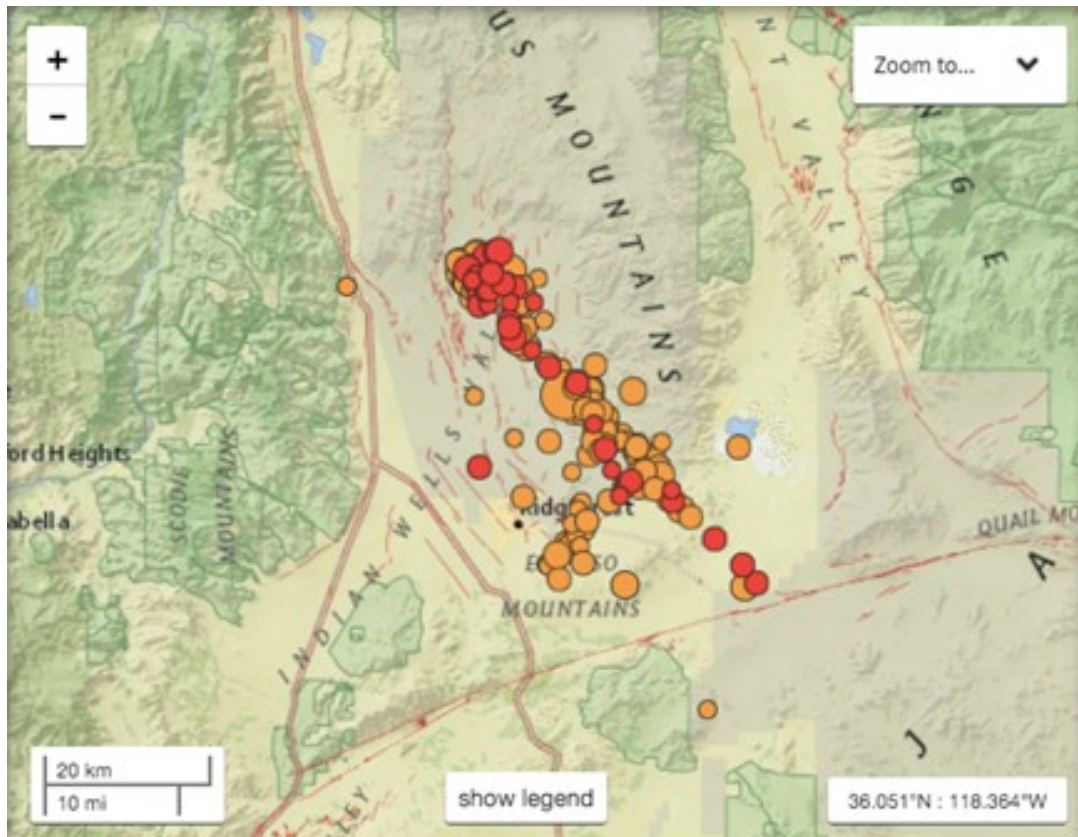

Date: 13:12:00 Jul 1, 2019

Near as I can figure He passed between Sun this morning around 9 AM Pacific Time - below the ecliptic again for Stereo cleared up substantially but is still experiencing slight distortion. This earthquake has been upgraded to a 6.0.

Date: 20:19 July 5, 2019

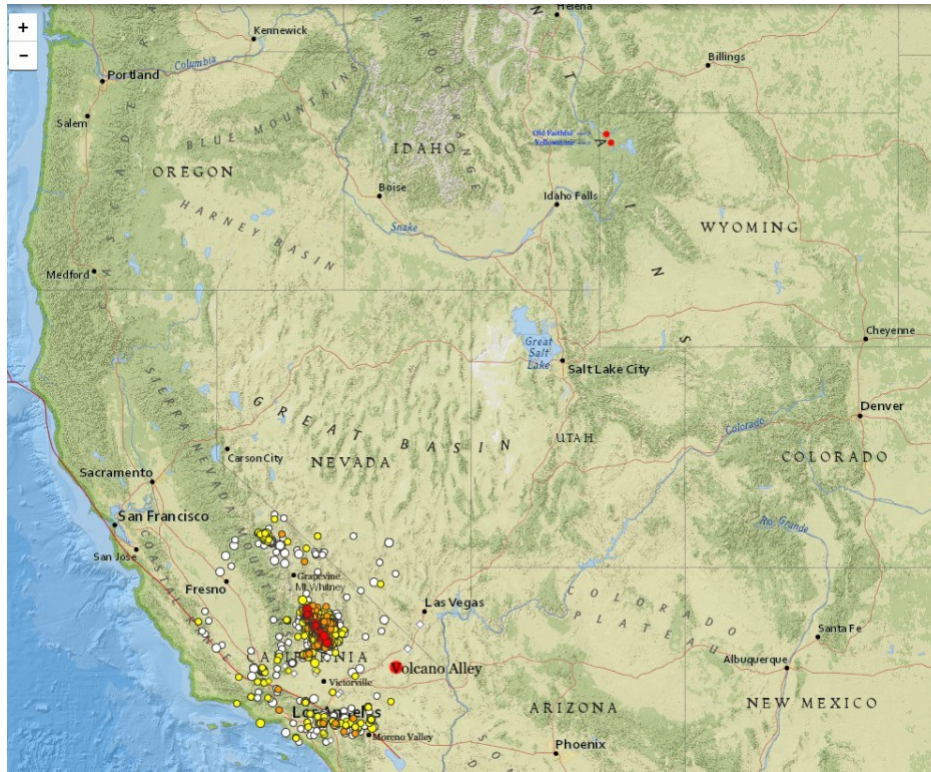

Earthquake at Ridgecrest 7.1 we were talking and I was, literally, making Eye Contact with Him when this quake struck which is why I have used this expression several times since then.

Literally unforgettable.

The politicians all around the globe started flipping out. Putin scrambled his cabinet, Pence got called back to DC, the Brits had a big pow wow and the EU had a big get together also and they scrambled several jets for dignitaries here in the US.

Scared the living shit out of em...

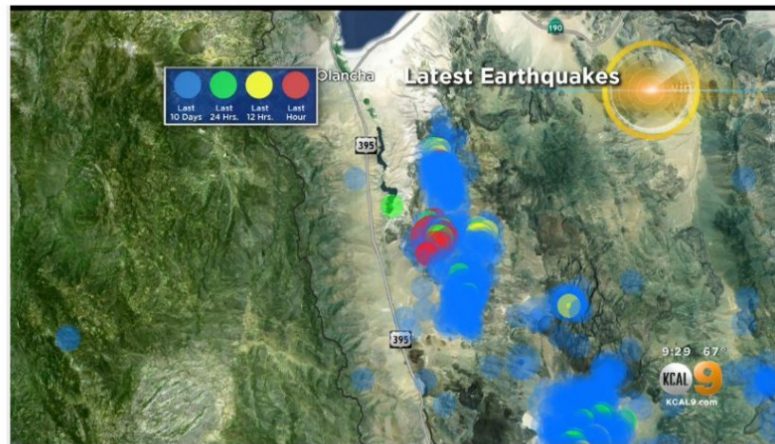

Date: 13:21:15 Jul 23, 2019

I lost him in Grapevine, California on the 2nd then those two earthquakes hit.

They might have tried nuking him with a combination of HAARP Arrays for a Wave Propagation Event and now that they shattered the bedrock they can't stop it.

Problem is that there is actually a Super Volcano right under that area. I live in Moreno Valley and was thinking about heading to Victorville...

RIDGECREST (CBSLA) – The steady string of aftershocks that have been rumbling around Ridgecrest appear to be headed for a fault that could cause a devastating earthquake of magnitude 8 or more.

Micro earthquakes have been shaking Ridgecrest since it was hit by a 7.1 quake on July 5, less than 48 hours after a 6.4 foreshock.

The latest relatively moderate shaker was a 4.6 that struck Coso Junction after 9 p.m. Wednesday. It was followed in quick succession by two earthquakes that were both magnitude-3.4.

Currently, they have experienced over 80,000 Aftershocks...

Date: 09:14:03 Jul 30, 2019

BRIGHT RED SPRITES: According to NASA, cosmic rays are intensifying. Martin Poppek of Nydek, Czechia, witnessed a likely side-effect last Friday night. "Red sprites exploded from the tops of two thunderstorms in front of my cameras," he says.

"The sprites were huge, and I could see them from quite a distance," he adds. "One storm was in the Adriatic sea about 550 km away, with a closer storm over Slovakia distance at a distance of 115 km."

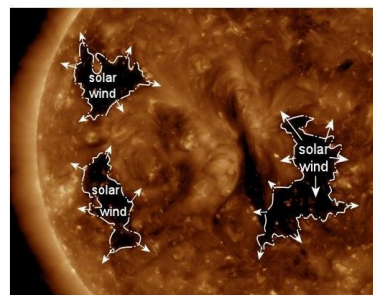

Hundreds of kilometers may sound like a long way, but a bit of separation helps when it comes to observing sprites over the tops of towering thunderheads. [Here's why.](#)

Cosmic rays are increasing because of Solar Minimum. During this phase of the solar cycle, radiation from deep space penetrates the sun's weakening magnetic defenses and enters Earth's atmosphere in greater numbers than usual. Some researchers believe that cosmic rays provide the ionizing "spark" that triggers many sprites.

HOLES IN THE SUN'S ATMOSPHERE: Earth is about to be strobed by three streams of solar wind—each flowing from a hole in the sun's atmosphere. NASA's Solar Dynamics Observatory photographed the gaseous spigots on July 29th.

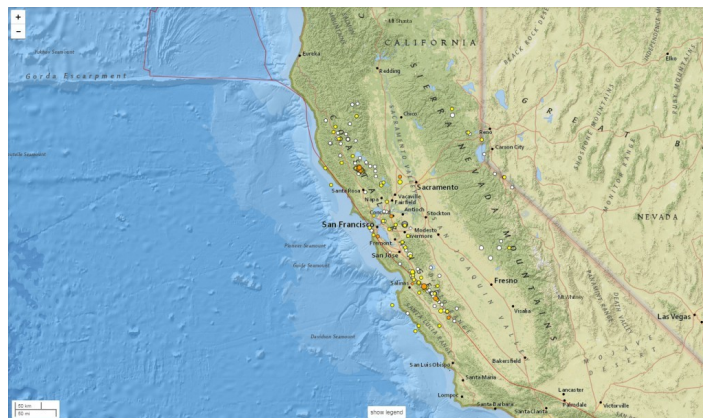

These are "coronal holes"—places where the sun's magnetic field peels back and allows solar wind to escape. Coronal holes look dark in extreme ultraviolet images of the sun because glowing-hot plasma normally contained there is missing.

The first of the streams is expected to arrive on **Aug 1st**, followed by two more in rapid succession on **Aug. 4th**. Polar geomagnetic unrest and possibly some minor magnetic storms are possible on those dates. High-latitude sky watchers should be alert for auroras, especially in the southern hemisphere where winter darkness favors visibility. [Aurora alerts: ShIS Text](#)

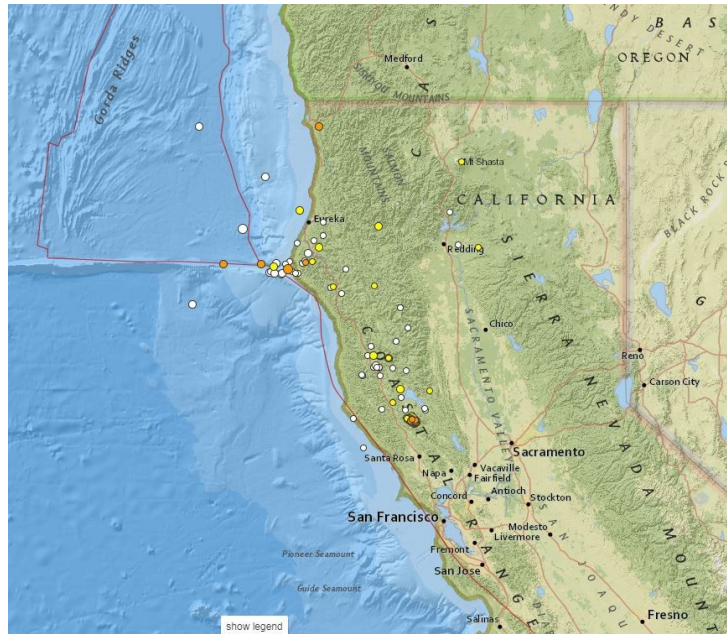

Earthquake Swarm just started a few days ago in San Fran and now it's heading north.

Last Week NASA checked it out with one of their research planes but they aren't talking about it...

Date: 12:35:07 Jul 31, 2019

Now it's walked up to Eureka but the major swarm is still hanging out at China Lakes with another smaller swarm directly on the San Andreas that wasn't there a couple of days ago...

Having split a few cord of wood in my time with a Wedge and Mall, this is what it reminds me of...

And China Lakes..

Yuh, right - the Jet crashed right near Grapevine Peak in Inyo County.

That is not a coincidence - check the rest of this thread if you don't believe me.

Or you could try splitting four cord of wood for your wood Stove (Pipe) this winter to stay warm...

Date: 11:39:51 Aug 2, 2019

That was 9 PM Pacific Time last night

GEOMAGNETIC STORM PREDICTED: A large [hourglass-shaped hole](#) in the sun's atmosphere is facing Earth and spewing solar wind in our direction. Estimated time of arrival: **Aug. 5th-6th**. NOAA forecasters say that [G1-class](#) geomagnetic storms are possible when the gaseous material arrives. **Aurora alerts:** [SMS Text](#)

LATE-SEASON NOCTILUCENT CLOUDS: Noctilucent clouds (NLCs) are a summertime phenomenon. Normally, the clouds begin to dim in late July, then fade away completely as August unfolds. It is their seasonal pattern. This year, though, things might be different. On July 31st, Alan Dyer witnessed a bright display over Gleichen, Alberta.

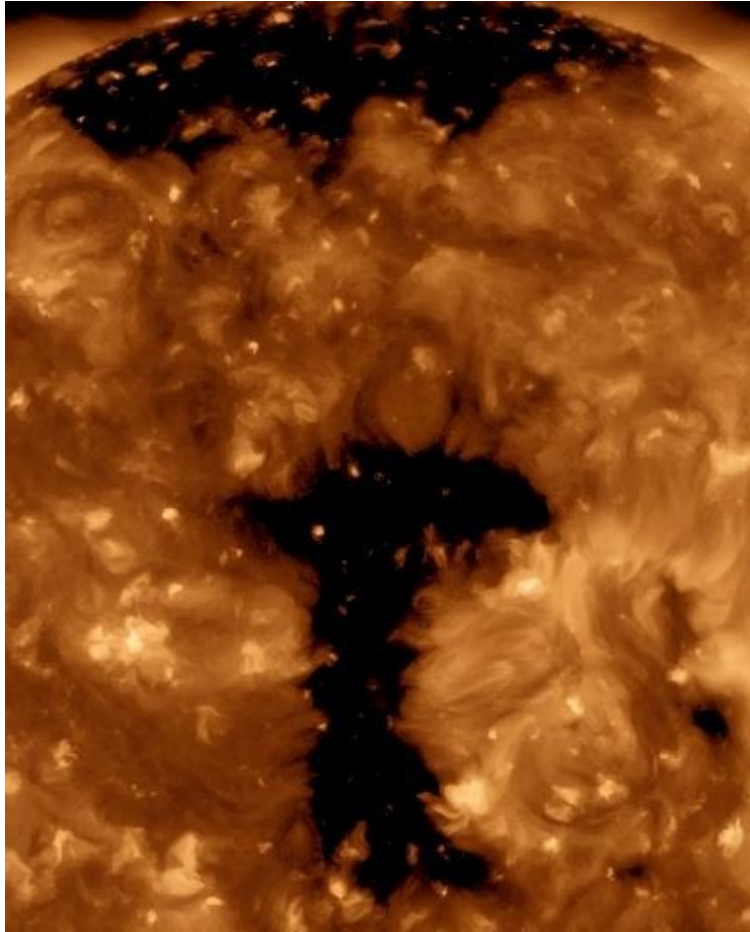

Dyer has been watching NLCs from the Great Plains of Canada for many years. "This is the latest I have seen them from southern Alberta (latitude 51° N)," he says. "At about the same time I noticed a prominent display of NLCs visible on the aurora webcam from Churchill, Manitoba at latitude 58° N."

2019 has been a very [unusual year](#) for noctilucent clouds, with sightings at [record-low latitudes](#) as far south as New Mexico and southern California. Why? NASA satellites have detected unusual amounts of water in the mesosphere. [The extra moisture](#) crystallized around specks of meteor smoke, creating an abundance of NLCs. If this trend continues, August might be a good month for NLCs contrary to normal seasonal patterns.

That's Him there.

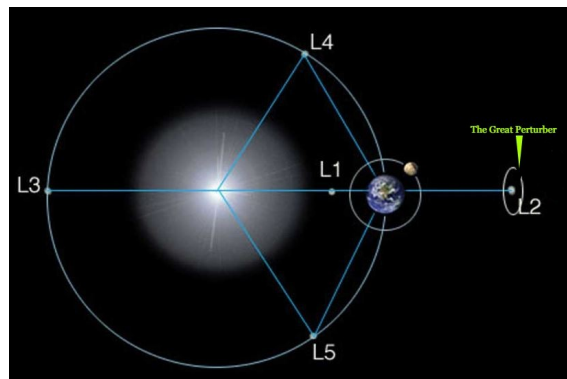

Note the resemblance to the image on the Sun's Surface?

Use your imagination and put his wings in motion

And I saw an Angel 'standing' in the Sun.

God the Father un-incarnate on the other side of Eternity before the Creation.

Date: 12:29:42 Aug 6, 2019

RED AURORAS OVER NEW ZEALAND: Auroras are usually green. However, when a geomagnetic storm crested over New Zealand on August 5th, a completely different color filled the sky. "It was amazingly red," reports Minoru Yoneto, who sends this picture from Queenstown, NZ:

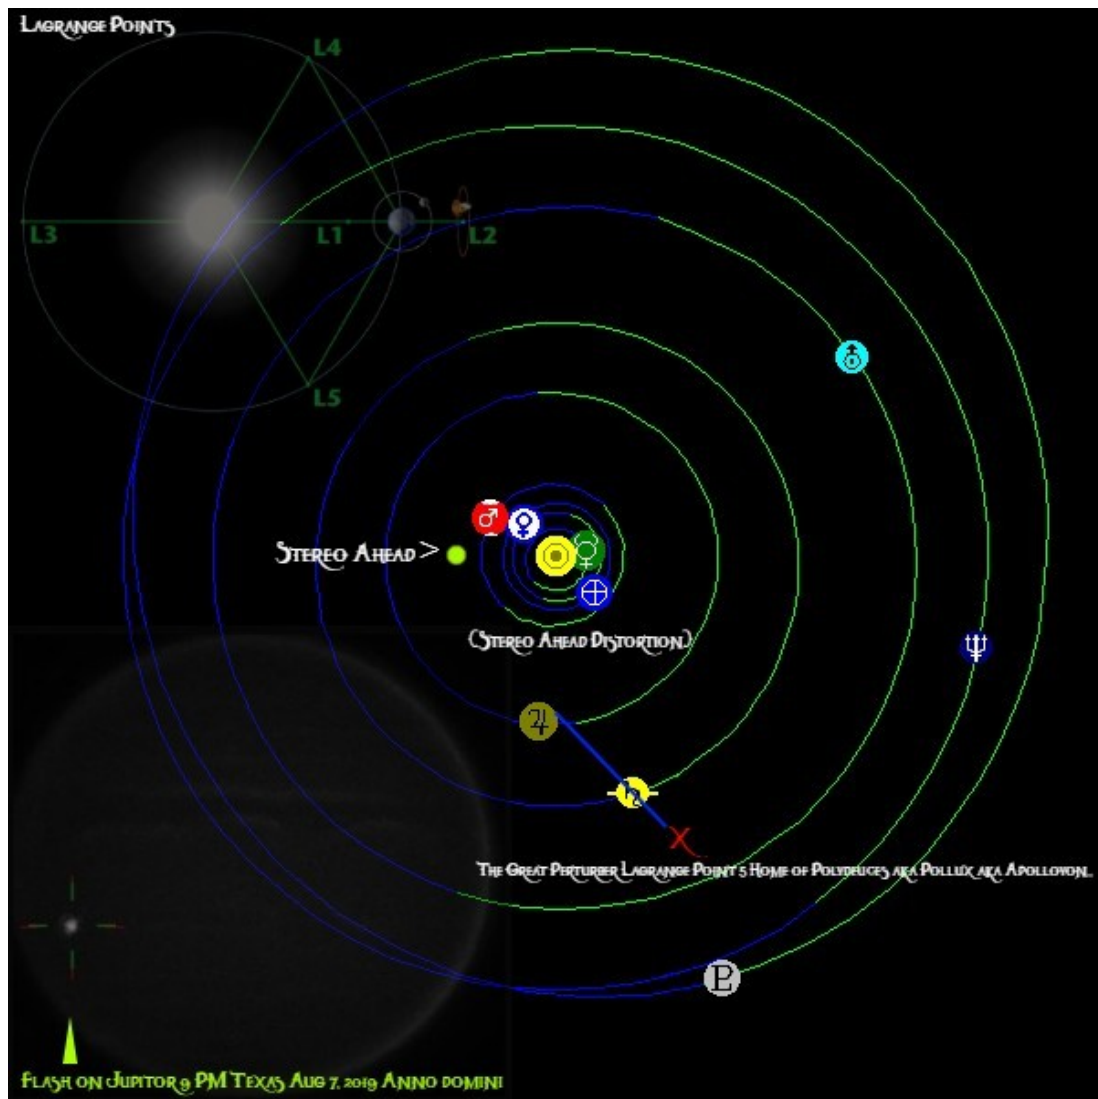

"I was conducting a stargazing tour, showing my clients the Milky Way and Magellanic Clouds, when the aurora australis appeared," says Yoneto. "A quick 15s exposure with my digital camera captured the magnificent colors."

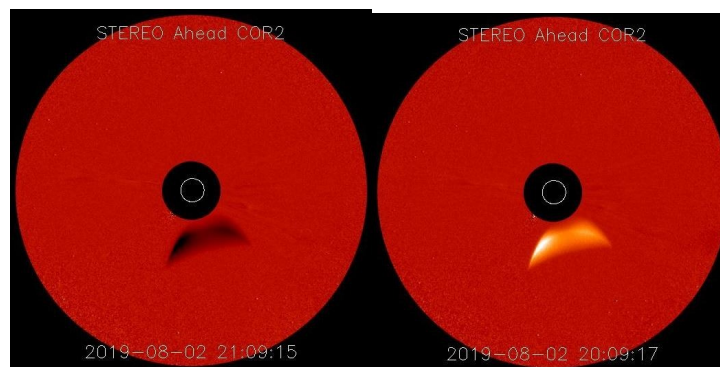

What made these auroras red? Ordinary green auroras come from oxygen atoms [excited by geomagnetic activity](#) about 150 km above Earth's surface. Red auroras are also caused by oxygen, but at a much higher altitude: Between 150 km and 500 km, the temperature and density of the atmosphere favors atomic transitions that emit red photons instead of green. For some reason, yesterday's geomagnetic storm excited the upper reaches of the atmosphere more than usual, producing a red glow over both hemispheres. **Aurora alerts:** [SMS Text](#)

GEOMAGNETIC STORM FORECAST: Earth is about to be hit by a double-stream of solar wind. The two streams are flowing from holes in the sun's atmosphere, shown here in an extreme ultraviolet image from NASA's Solar Dynamics Observatory:

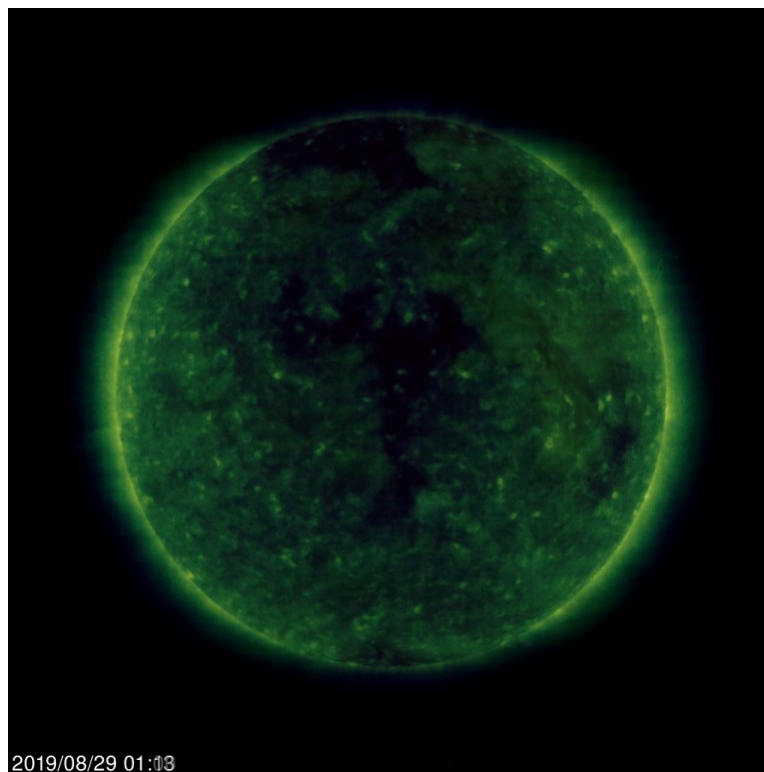

These are "coronal holes," places where the sun's magnetic field opens up and allows solar wind to escape. Solar wind flowing from the right coronal hole is expected to arrive on **Aug. 28**. A more potent stream of solar wind flowing from the left coronal hole should reach us on **Sept. 1-2**.

Date: 11:26:55 Sep 3, 2019

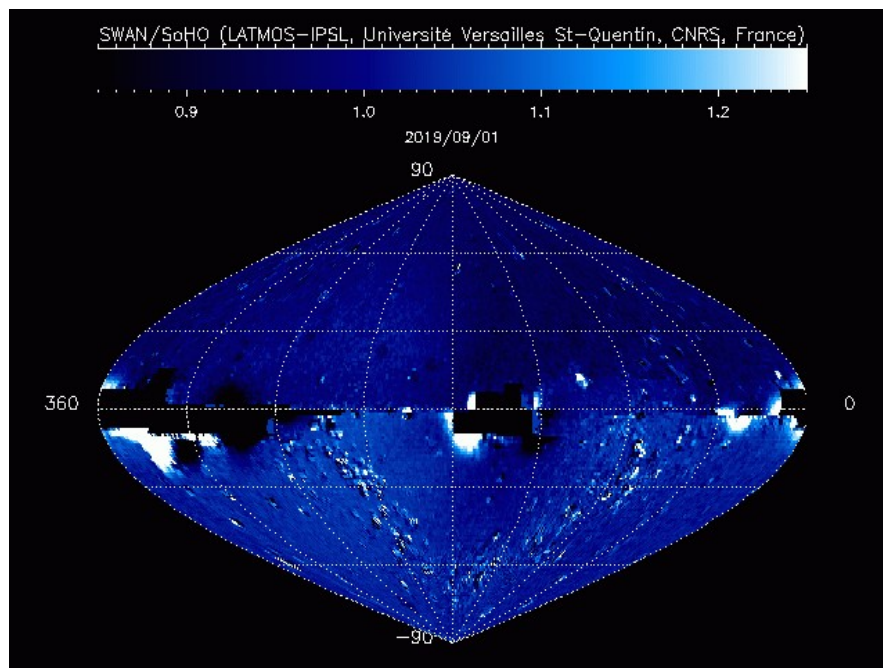

These are the SWAN Images that they have been hiding since July 27th and their entire Website was Tango Uniform on Saturday - see the Swarm coming up from underneath? It takes about four days for them to get here.

I know this because the same thing happened circa June 2013 AD when Planet X passed through and this Swarm is comparable to those - see next image.

This is a 'normal' SWAN image :

What this means, which NASA won't tell you, is that a High Mass 'Object' recently Perturbed the Asteroid Belt...

Date: 16:17:14 Sep 6, 2019

Date: 09:01:43 Sep 10, 2019

This is, apparently, a 'Glitch'.

Question is, what caused it?

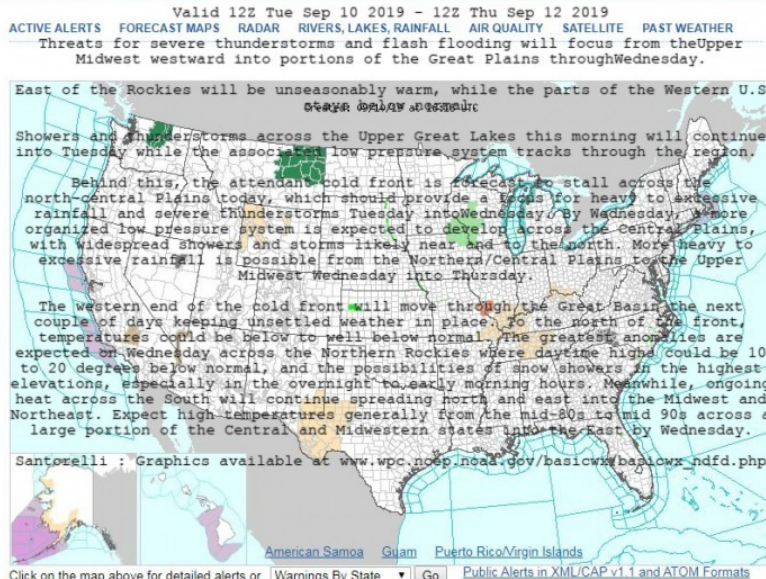

Yesterday the retards withheld 14 hours of SOHO Images in which I fully expected to find evidence of His presence so its like He was telling our enemies, "I've got an image for ya."

You know - me and my Shadow.

Severe Weather over the entire Phucking Country!

Fall System to Bring Severe Storms to Plains, Snow in Higher Mountains, and Monsoons in the Southwest

A vigorous cold front is tapping cooler air from Canada and combining with Monsoon moisture to bring a variety of impacts. Significant damaging winds, very large hail, isolated tornadoes, and heavy rain from severe storms are possible in the Midwest. Monsoon moisture drawn up ahead of the front may produce flash flooding in the Southwest, and snow above 8,000 feet in the North and Central Rockies. [Read More >](#)

The above is the Special Weather Statement for Texas...

Date: 10:40:33 Sep 11, 2019

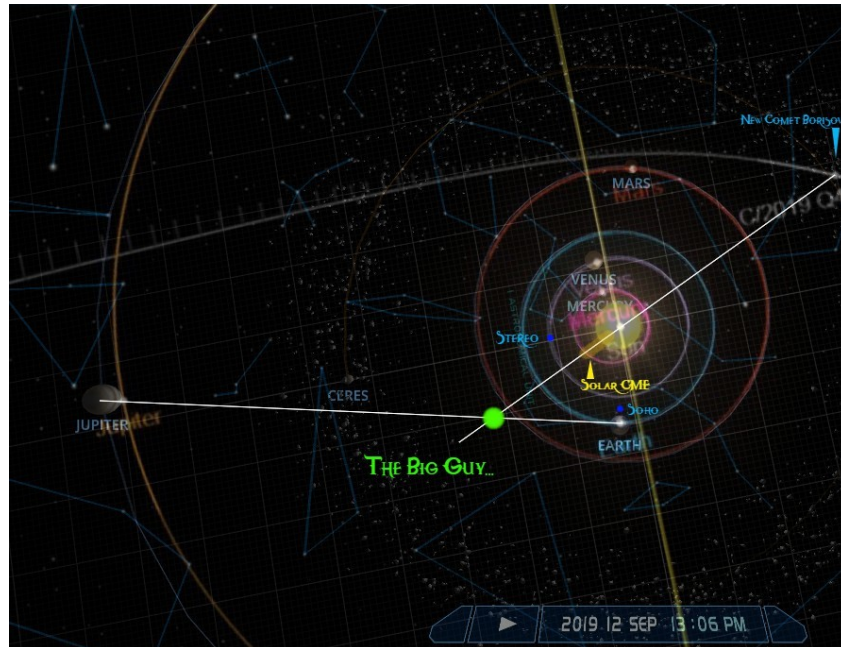

Concerning the 9.0 the other day - you will note that it occurs precisely on the Equator and the Prime Meridian (which I just looked up less then two days previously) which can not be a coincidence so you have one of two options.

Either the people who run this world caused that glitch just to impress me who is, virtually, a nobody.

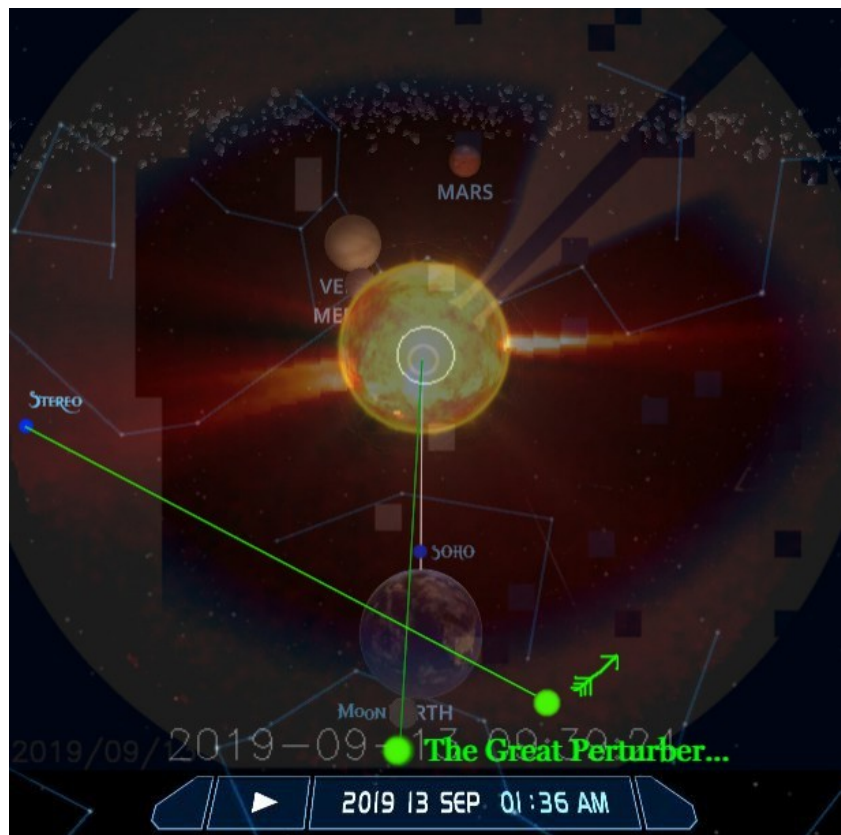

Or Hehka is having a little fun making our enemies sweat.

Either way, it sucks to be my enemies...

Date: 14:36:27 Sep 12, 2019

Date: 13:53:08 Sep 13, 2019

He's directly over my head...

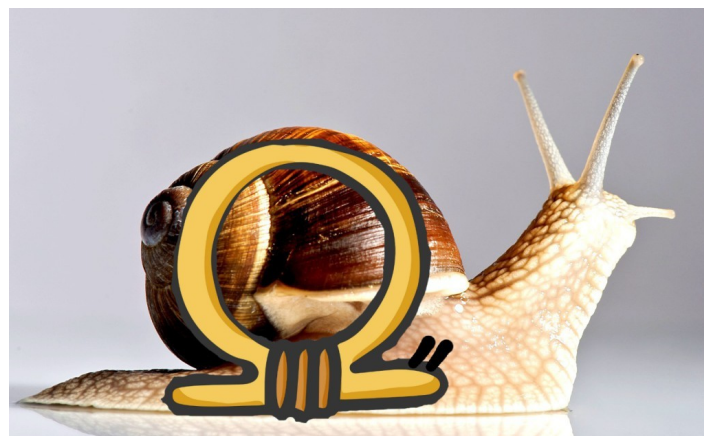

Editor's Note June 29th, 2022 Anno Domini

They started withholding all the images that I was using to track Him so I, basically, didn't bother anymore and turned to Predynastic Masonry and Theology during the interim.

One thing that did occur was the dimming of Betelgeuse which, after forgetting about, I stumbled over again by backtracking on another subject which is in my notes somewhere, hopefully, and I'll go fetch it after this but what it amounts to is that His Mass was responsible for the dimming.

I picked up again below after Coronavirus Restrictions when I got this Cell Phone specifically as to why my translation has not occurred yet.
